

Data into Power BI

Dataflows Details

Dataset Details

Option 1

Power BI Service

Power BI "Datamart" (Preview)

Dataflows

Datamart

Dataset

- Container to hold both a dataflow and SQL database hosted in Azure, which can be queried using either SSMS or Azure Data Studio
- The Dataset is automatically created and uses SQL db as source
- All modifications are made online in the Power BI Service platform

Option 2

Power BI Service

OptiPower BI Desktop Application

Dataflows

Datasets

Dataset

Dataset

Dataset

Local Workstation

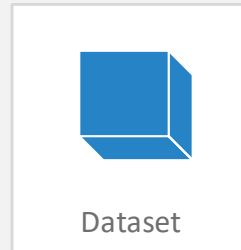

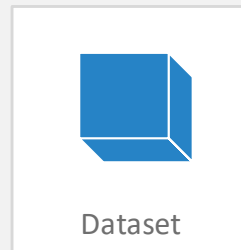

Local Workstation

- Use the Dataflows in Power BI Service as the data source
- Build the dataset and report locally
- Push the report back up to the Power BI Service
